June 2009

As you probably know, downtime is not an option for any data centre, office, Telecoms, bank, hotel or factory. Loss of power means loss of working machinery, lighting, & importantly profit and customer satisfaction. **Generator Associates Ltd** have used their 20 years of experience in the industry, to provide some useful factors for consideration when choosing your next backup or standby generator & UPS system.

#### **First some noteworthy comments:**

Generators are more practical for standby power systems due to their cost, size and weight.  
Generators are the best option when anything more than half a day's power is required.  
Generators do not need to be used alone, but multiple generators can be synchronised and their output joined.  
Generators can be combined with a UPS & ATS to enable automatic changeover and continuous power.

#### **Points to consider when deciding upon your new generator:**

Do you want a diesel generator or gas. Diesel generators are common because diesel is low cost, stable over time, and has low flammability. Are there any restrictions on exhaust emissions or noise.  
Where will the generator be located – inside or outside. Are there any size restrictions. What about ventilation?  
What items do you need to power, and what is the required power in total.  
Does the new generator or UPS system need to work with existing standby power systems.  
Do you want maintenance included with your generator or UPS system.

Many business professionals do not have the time or desire to spend time assessing all these considerations and more. **This is what Generator Associates does.** They help busy professionals who know they have a power supply problem, but do not know (or want to know) the technical details of how to solve it. Generator Associates are experts and will assess their client's situation and provide a rapid solution, saving them time and money. Whether it is a generator or UPS sale, hire, lease, maintenance or installation you require, Generator Associates provide the solutions. Call them now on UK **01623 624005** or visit their website [www.generatorassociates.com](http://www.generatorassociates.com).
