

Press Release

Babcock choose Generator Associates to help them keep passengers moving and flights on schedule at Heathrow Airport.

Generator Associates were approached to offer a range of solutions for generator hire, sales and lease of 2 x 500kVA in N+1 configuration to power a baggage recovery facility airside at Heathrow airport.

Introduction: Babcock offers a multitude of services from design, installation and management of complex baggage handling systems, to engineering support for ground support vehicles. Babcock's Airports Division provide integrated airport solutions to keep passengers & flights on time. When one of their projects required a diesel generator to provide power at a remote location airside at Heathrow Airport, a suitable generator supplier was required.

Synonymous with ultra-reliable engineering excellence, Babcock chose Generator Associates because they wanted an organisation who would deliver the project on time & on budget. Initially a hired 500kVA diesel generator, external fuel tank, cable & bespoke MDU board were chosen for the baggage recovery facility. Following advice from Generator Associates & due to the critical nature of the project, BAA & Babcock decided they preferred an N+1 configuration, consisting of 2 x 500kVA diesel generator systems.

Logistics & Installation: Delivering and positioning multiple large items with a hiab vehicle at one of the busiest airports in the world is no simple matter. With the assistance of the team at Babcock, both systems comprising of the 500kVA generator acting as mains power, and a 500kVA backup system, were delivered and installed. Generator Associates also supplied and installed a mains distribution unit with various outgoing MCCBs. The system was then commissioned & tested.

Support: Included as standard in Generator Associates hire projects, the client had 24/7 call out facility & technical support. The equipment was routinely serviced & on site training provided as per the clients request. The hire solution was required for over 12 weeks until mains power was installed.

Whether it is Generator or UPS hire, supply, lease or maintenance you require, Generator Associates act as independent consultants and offer complete one-stop solutions for commercial and industrial organisations worldwide.
