The electrical contractor has chosen Generator Associates to provide generator hire and fuel management for Wealden District Council offices as they upgrade their current electricity supply.

July 2008

GM Monks Ltd is a firm of electrical contractors who needed a reliable and competent generator hire supplier who they could trust. They provide a range of services including new installations, void property works, responsive repairs and maintenance for a range of clients including Local Authorities, Schools and Housing Associations. For one such project – Wealden District Council – GM Monks needed a generator solution that would arrive on time and on budget. So they contacted Generator Associates who were delighted to work with this approved and experienced contractor.

Whilst the electricity supply was being upgraded, the Council needed another source of power for the Council buildings and the Freedom Leisure Center. Two separate 250Kva three-phase diesel generators were chosen as the preferred solution, in conjunction with a range of ancillary equipment including cable and fuel tanks. Generator Associates were also asked to provide fuel management services for this important project, to ensure the project flowed smoothly from day one. John Bulwer – General Manager – is delighted with the fast and reliable services Generator Associates have provided. *"From day one we have been very satisfied with the products and services provided by Generator Associates, and when ever they have told us things will happen – they have! The whole team treats us well and the fuel management services they provide eliminates the hassle of running the generators. We would whole heartedly recommend them to other businesses that want a no nonsense and cost effective service".*

The importance of the Wealden District Council project to GM Monks meant they could not take any chances, which is why they chose a company with a proven track record of delivering on time and on budget solutions.

Generator Associates hire a range of generators from 50-1500Kva in individual sets, as well as a range of auxiliary equipment including bunded fuel tanks, cable, distribution equipment, trailers and containers. Super silent generators are also available for hire and sale. Take a look at www.generatorassociates.com for more details.
