**Generator Associates Ltd have been selected to provide Project Management services to Charnwood Borough Council after proposing and sourcing various cost-effective solutions for their requirements for emergency power generation.**

March 2007

The district of Charnwood lies between Nottingham, Derby and Leicester, and has over 155,000 residents who rely on their Council being able to continue working even when the mains power fails – therefore the Council had to find an organisation who would investigate their problem and offer flexible and sound solutions.

Generator Associates were chosen to provide complete Project Management services for the venture, including finding suitable partners for the provision and fitting of equipment to the switch room. Other work includes the provision and connection of hired temporary generators when required, and then the provision and connection of a permanent diesel generator.

One of the additional services the Local Authority may wish to take up with a host of other clients, is the competitively priced and reliable Fuel Management services offered from this rapidly expanding and flexible Generator hire, supply, lease and maintenance organisation. Nothing is too much trouble for them, because they have a truly customer-focused approach to business.

Generator Associates were chosen to identify and then work alongside various carefully selected service providers to design appropriate systems to meet Charnwood Borough Councils specification and requirements, and ensure the project is completed as arranged. They have been liaising with the Asset Manager of Charnwood Borough Council to ensure the project runs smoothly.

Whether it is Generator or UPS supply, hire, lease or maintenance you require, Generator Associates can act as independent consultants and offer complete one-stop solutions for businesses and organisations throughout the UK. If you need a reliable and competent Generator supplier who can offer a range of services including Project Management and Fuel Management, contact Generator Associates today and let them start finding the most cost-effective solution for you.
