A major automotive parts manufacturer in the UK, has taken delivery of two 1100Kva diesel generators to power their extensive new production facility.
July 2006

Generator Associates, the specialists in generator hire, sales, supply and leasing, have just delivered two 1100Kva diesel generators to provide 2.2mw of power for a new production plant in the UK. The generator system included control panels, switching, fuel tanks and a complete maintenance package for the years to come. Generator Associates also arranged delivery of fuel to power the new generators, and took on entire project management for these highly satisfied clients. The large automotive parts manufacturer took advantage of the leasing services offered by Generator Associates, meaning they received an exceptional power supply solution at a low fixed monthly rental.

The client required a bespoke generator solution because their national mains electricity network provider were unable to upgrade power supply needed for their new production facility, without the massive cost of building a new electricity substation and laying high capacity cables. Generator Associates sales and leasing options provided the excellent alternative of a diesel generator system, which would provide all the primary electricity required to completely power the new facility to the exclusion on the mains supply.

The clients choose Generator Associates because of their reputation for quality supply and sales, rapid response and technical expertise. Project Manager for the manufacturing firm said, "Generator Associates have been efficient and quick to respond from the start. They responded within 2 hours of our initial enquiry and provided their first quotation within 24 hours. Not to mention their site visit within the first 48 hours. No one else responded as quickly and comprehensively as Roger and the team at Generator Associates. We felt like their priority and they took on our power supply problems as their own. My life was made easy as they gave expert technical guidance, excellent costings and importantly friendly advice. Their generator and UPS leasing option is a real benefit." The clients senior Production Manager praised Generator Associates saying "they have done all that they promised they would do – everything. Their team were even on site the night before installation, talk about being on time. What more could we want".

Generator Associates provided new generators, fueling, and project management for this client, who were delighted with the professional and personal service provided. Another generator system provided on site, on time, on cost – As always. Whether it is a diesel generator hire, sales or rental you require, Generator Associates provide a range of new and used generators to exceed your expectations.

For Immediate Release
